

Brief

# Simplify the SAP lifecycle with HP cloud automation

## HP Converged Cloud solution for SAP® landscapes

Minimize and optimize the time and resources required to deploy complex business applications and make it easier for users to consume services.

### The HP and SAP advantage

HP has worked together with SAP for over 20 years and has implemented more than 77,000 SAP installations worldwide. In fact, HP Converged Infrastructure runs 46% of all SAP licenses in the world. HP is SAP certified for cloud services and provides full lifecycle support for your SAP landscape. The SAP and HP partnership provides you with a comprehensive portfolio of extensible and open standards-based solutions for SAP across HP platforms.

### Evolve faster

Today's business environment is evolving faster than ever. This places immense demands on IT to deliver the flexibility that allows enterprises to address complex business requirements at the speed of change.

When it comes to business-critical SAP application landscapes, you need to overcome the complexity of heterogeneous IT environments. That means replacing them with fast and flexible service deployments that allow you to start benefitting from SAP applications as soon as possible. This also allows you to dynamically manage changes in your landscape—all while keeping a close eye on the bottom line.

### Adding cloud to your SAP landscape

HP is blazing a path to a cost-effective, flexible, and dynamic model for delivering business-critical SAP applications—as well

as non-SAP applications and technology—based on our proven, standards-based HP Converged Cloud solutions.

This new model will make it easier, faster, and less costly for you to change or deploy SAP and other applications with a highly automated hybrid cloud computing solution.

The solution allows you to add hybrid cloud capability to your environment, giving your SAP applications incredible portability to better adapt your environment to meet your business needs. Now you can develop in the public cloud, host your production environment in a private cloud, and burst into yet another, making it easier than ever for users to consume services, and for IT to manage them.

This transformation is made possible with a dynamic ecosystem that consists of the SAP architecture, HP Converged Cloud, and you.

### A solution for today – and tomorrow

The HP Converged Cloud solution for SAP landscapes will help you quickly automate your critical applications with all the benefits of a hybrid cloud. It's a step you can take that will immediately impact your organization today, and have a lasting effect on the future.

## SAP and HP Converged Cloud

SAP solutions empower people with the freedom to work in real-time, any time, and anywhere, enabling companies to shape innovation in their industries and lead their markets.

HP Converged Cloud is the industry's first hybrid delivery approach and portfolio based on a common architecture that enables you to build, manage, secure, and consume cloud services that span private, managed, and public clouds, as well as traditional IT.

The complete solution stack includes a combination of HP Software, HP Services, and HP Converged Cloud Infrastructure. Using a hybrid delivery model based on HP Converged Cloud solutions in your SAP deployment and lifecycle management gives you flexibility, speed, and cost efficiency. This in turn fuels innovation, insight, growth, and faster response to user and business needs.

### Built on proven HP Converged Cloud

The HP Hybrid Cloud delivery model for SAP landscapes starts with HP CloudSystem. Based on proven, market-leading HP Converged Infrastructure and Cloud Service Automation, HP CloudSystem integrates servers, storage, networking, security, and management to automate the infrastructure-to-application lifecycle for hybrid service delivery management.

SAP customers using HP CloudSystem also benefit from included Cloud Maps for SAP landscapes. These prepackaged, optimized, and tested templates can be imported directly into HP CloudSystem and customized to create catalogs of SAP application services ready for push-button deployment. HP Cloud Maps save days or weeks architecting infrastructure and application workflows.

HP CloudSystem is the industry's most complete, integrated platform for building and managing cloud services. Using HP Cloud Maps together with HP CloudSystem ensures your journey to the cloud will be quick, error-free, and impactful.

## Benefits across the organization

This solution puts your most critical business applications on the most trusted hybrid cloud platform, creating both business and IT benefits.

### Business benefits

- Minimizes and optimizes the time and resources required to manage an SAP deployment
- Simplifies current IT processes, making it easy for business users to consume services
- Reduces the burden on IT resources
- Provides the flexibility to address business requirements faster
- Brings new economics—driving a new level of innovation—to your business
- Provides available services to transform your applications to make the hybrid cloud work for you

### Technology benefits

- Highly automates complex workflows and approvals
- Delivers dynamic capacity management
- Provides application portability across the hybrid cloud
- Automates the end-to-end solution lifecycle
- Leverages proven, standards-based HP Converged Cloud infrastructure
- Enables you to apply the same HP Converged Cloud solution for non-SAP applications
