

HP solutions for improved business insight with mySAP ERP

Partnering to deliver a comprehensive view of your business

To be competitive and succeed, companies need real-time analysis of their critical business functions across the enterprise. mySAP ERP provides the analysis a business needs. HP provides the flexible, trustworthy infrastructures and proven experience to help you convert analysis into insight and action.

Insight to help you exploit opportunities to compete and win

Designed to deliver accurate, integrated information and a complete business view, mySAP ERP helps businesses identify opportunities for growth and greater efficiency to improve their competitiveness.

Identifying those opportunities takes more than access and integration of information. It requires sophisticated tools for analysis, streamlined reporting, planning, forecasting, and performance measurement and control. mySAP ERP delivers all of this – through SAP Business Intelligence (BI), SAP Strategic Enterprise Management (SEM) and other components such as mySAP Financials. Together, they form a complete solution that addresses the challenges companies face today.

Addressing those challenges also takes an experienced partner to help you design and implement an infrastructure that consistently delivers reliable information and supports comprehensive business analytics.

With our years of experience implementing mySAP ERP solutions, HP has helped hundreds of customers around the world improve their business insight. And we've done it with each customer's individual needs in mind to give them the choice and flexibility they want.

Bottom-line data consistency for top-line analysis

A comprehensive business insight solution has to follow a two-step approach: First, data must be integrated across different functions and applications to deliver accurate, consistent and reliable information in real time. Second, this data has to be aggregated and analyzed to provide top-line reports, decision support, forecasting and planning. SAP BI serves as a platform for integrating data and streamlining and automating the process of information identification and delivery. Information delivered by SAP BI is leveraged by specialized analytic applications, especially SAP SEM and mySAP Financials, to provide high-level, cross-functional insight for performance measurement and strategy definition.

Companies can take both steps at the same time, or start by integrating their data and later implementing more sophisticated business analysis tools. Whatever path you choose, see how HP can ease the way:

Flexible infrastructures for business insight

Support for transition and evolution

With special services designed for incremental evolution, HP supports the transition to mySAP ERP from older R/3 releases and the integration of data in the SAP system. For customers that have already implemented mySAP ERP, we take your solution to the next level by helping you to benefit from the complete business insight capabilities of mySAP ERP.

Integrated business intelligence infrastructures

Based on an unmatched portfolio and experience from several hundred business intelligence projects, HP provides single-vendor solutions for the creation of an integrated, company-wide data warehouse as the basis for business analytics. HP offers specialized Application Integration services that build an integrated environment. For collaborative business scenarios, the HP Real Time Supply Chain (RTSC) solution offers genuine real-time data integration – even from batch applications.

Business insight experts to integrate and synchronize

Our large, highly skilled service organization and business insight experts synchronize SAP's pre-integrated business insight components (for example SAP BI and SEM) and size them to your needs.

Managing information from insight to action

HP helps you distribute business insight across the enterprise so you can convert it into action. HP content and document solutions support you in effectively managing information throughout its lifecycle and save, retrieve and archive all data, protecting its integrity and providing continuous accessibility over time.

An infrastructure to grow with your business

HP server and storage solutions are highly scalable to dynamically adapt to the growth of your business and SAP installation. HP's portfolio based on industry standards with built-in operating system flexibility offer excellent adaptability.

Continuous availability for fast, reliable response

HP offers superior server and storage performance and availability for fast response times. HP's server and storage solutions designed for instant resource activation and comprehensive partitioning solutions provide stable, mission-critical processes that are not impaired during data extraction, even at peak loads. They also deliver continuous availability and operation of transactional systems, such as mySAP Financials. HP Mission Critical Services help you proactively implement IT changes needed to meet the ongoing performance and availability goals of business intelligence users.

Innovative security solutions

HP offers innovative security solutions to prevent the distribution and print-outs of data and documents from unauthorized viewing or alterations.

Central data transfer and backup

HP offers industry-leading storage and rapid backup and restore solutions enhanced for SAP and large data volumes and fully integrated into HP OpenView, HP's system management solution. HP EXsid automatically creates copies of the entire SAP system, reducing manual effort and operator errors.

Together, SAP and HP offer end-to-end solutions to help enterprises of any size adapt to changing business needs and sharpen their competitive edge. .
